Profile

In field of informatics I have been 15 years, I always had a passion towards computers. In 2000 when I got my first computer, I spent my whole days on it. Naturally my curiosity just got bigger and bigger, so I decided to push it more. Now I have graduated and got my diploma form University of Novi Sad. I have programmed in many languages Java, C, Assembler, SQL, Python, also had experience in HTML, CSS, JS, I have knowledge in MS Excel, Word, PowerPoint, a little with VB Script . I worked on modeling systems with UML2, also concurrent programming in Java. Since my whole program was based on Java, I spent 3+ programming in it. I have also programmed in Wolfram Mathematica, since our program had much of mathematics, I also worked with Calculus, Discrete Mathematics. I liked working on Data Structures and Algorithms from theoretical point, but also from practical point of view. Now I can program in all languages i just need a little of documentation of language and that is it. My personal preferences are actually in high level functional languages because the syntax is just amazing for me. I am grateful that you taking time to read my intro, and I open to any proposal for work. You can contact me over LinedIn or E-mail : rajkodakic90@gmail.com.

Skills

Program Developer

Top down, bottom up, all methodologies of development, structural, object-oriented, functional

API Design

Implemenatation and design of Api for all purposes

Data Structures and Algorithms

Ability to find solutions to mesure them, and to make them work, as intended

Technical

HTML	Java	UML2
CSS	C	Design Patterns
Javascript	SQL	Linux

Experience

Freelance Projects
Database Modeler

2019-2019

Design and implementation of database for Local Roma Communty. Project in association with European Roma Rights Centre: ERRC.org

Freelance Project
Web Design - and Administration

2020-2020

Cpanel administration - technical support. Also, content manager and service provider for site hosting, wordpress installation, plugin management, site migration and backup services

Python Data Scraping
Programmer

2020-2020

I made Python scripts for ad campaigns, for scrapping, and automatization of jobs, that ware necessary for ongoing sales business in mobile industry. Whole campaign took one month of time. Job was successful. We made software that advanced human power for 60%. Job that were needed to be done in 30-day period with our solution was done in 5 days.

Education

University of Novi Sad, Novi Sad
Bechelor - Computer Science — **7.6**

Academic studies in Computer Science - Information Technologies. Acquisition of fundamental knowledge in programming languages and paradigms (structured, object-oriented, functional, logic), algorithms, operating systems, databases, and information systems. Core mathematical disciplines required for analysis, understanding, problem solving, as well as for successful implementation of principles and techniques of informatics.
